

The Radiation Angels: The Chimerium Gambit

By James Daniel Ross

When civil unrest strikes a planet, when invaders get past the navy and start their ground assault, when terrorist forces attempt to topple a government, you can contact the last vestige of ground soldiery: Mercenaries.

Captain Todd Rook is in charge of an elite fighting force: The Radiation Angels. Armed with searing plasma cannons, armor piercing railguns, or semi-smart explosives, these are the high tech warriors who get the most dangerous jobs done. As long as the mercenaries get paid, as long as everybody plays by the rules, everything is fine.

Though contracted to enter battle on Ashley 9, at every turn it appears that their employers are set on making their job as difficult as possible. They were promised generous pay, an easy battle, and spoils of war.

All these promises are broken.

Faced with economic ruin, Rook decides to bet his life and the lives of the Angels on a long shot that will put them all in mortal peril. It's a gamble that will take them across the known universe to the most lawless planet in all the colonies: Mars. Chased by cyborgs, enemy mercenaries, and an aerospace task force, Rook has wagered everything he cares about upon...

...The Chimerium Gambit.
